

AGL RHSA-EG
2017/9/22

Reference Hardware Schedule

Next Step (Aug 2017)

Towards Open Draft [OEM]

- Complete the list of peripheral devices & function allocation.
- Clarification of the functional scope in AGL.
 - RSE
 - Cluster / HUD
 - Emergency call

Next Step (Sep 2017)

Towards Open Draft [OEM]

now in progress

- Define the hardware specification draft
 - Rough block diagram of Ref-HW
 - 3 kinds Ref-HW? (Luxury/Middle/Low)
 - Special requirements
 - Adopt at least 2 kinds of SoC
 - 2 boards constitution : Main board + Extension board
 - Main and Ext boards can be combined freely with COMMON I/F.
- Define the software specification draft
 - AGL specification to operate on various IVI system configurations (Selector, Vehicle Data Abstraction etc.)
 - Additional function to AGL platform (in-deck decode etc.)

→ Summarize and announce it as “Reference Hardware Open Draft”

Future Plan (Oct-Dec 2017)

Towards Ver1.0 specification [OEM+Tier1/SoC]

- Recruit Tier1 and/or SoC vendors
- Define the hardware specification
Physical design of Ref-HW (HW block layout, communication I/F, ...)
- Define the software specification
SW design to operate Ref-HW
Some of EGs already started discussion related with this topic.
ex. “Selector” has a close relationship with Audio Management Arch.
(under discussion in UI & Graphics EG)

→ Summarize and announce it as “Reference Hardware Specification 1.0”

Future Plan (2018)

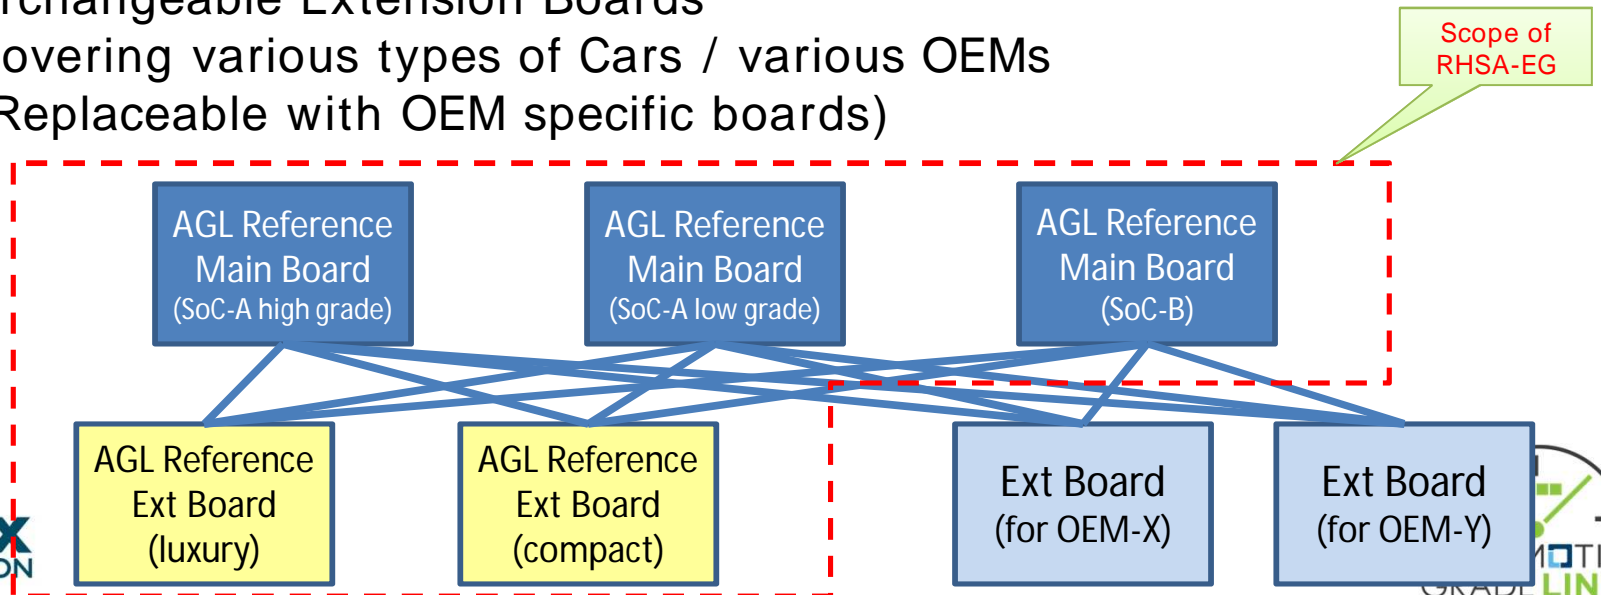

Towards Ref-HW development [OEM+Tier1/SoC]

- Reference Hardware development
 - Board development ... Tier1 or SoC vendor
 - 3 kinds of demo systems? (Luxury/Middle/Low)
 - at least 2 kinds of Main Board
- AGL Software development
 - Device driver / HAL layer (BSP) ... Tier1 or SoC vendor
 - AGL UCB (for FF*) ... Community *AGL 6.0.0:Funky Flounder
 - Application (if required) ... ?

→ Construct Demo System for CES 2019.
Show AGL UCB(FF) is running on Ref-HW boards (Luxury/Middle/Low)

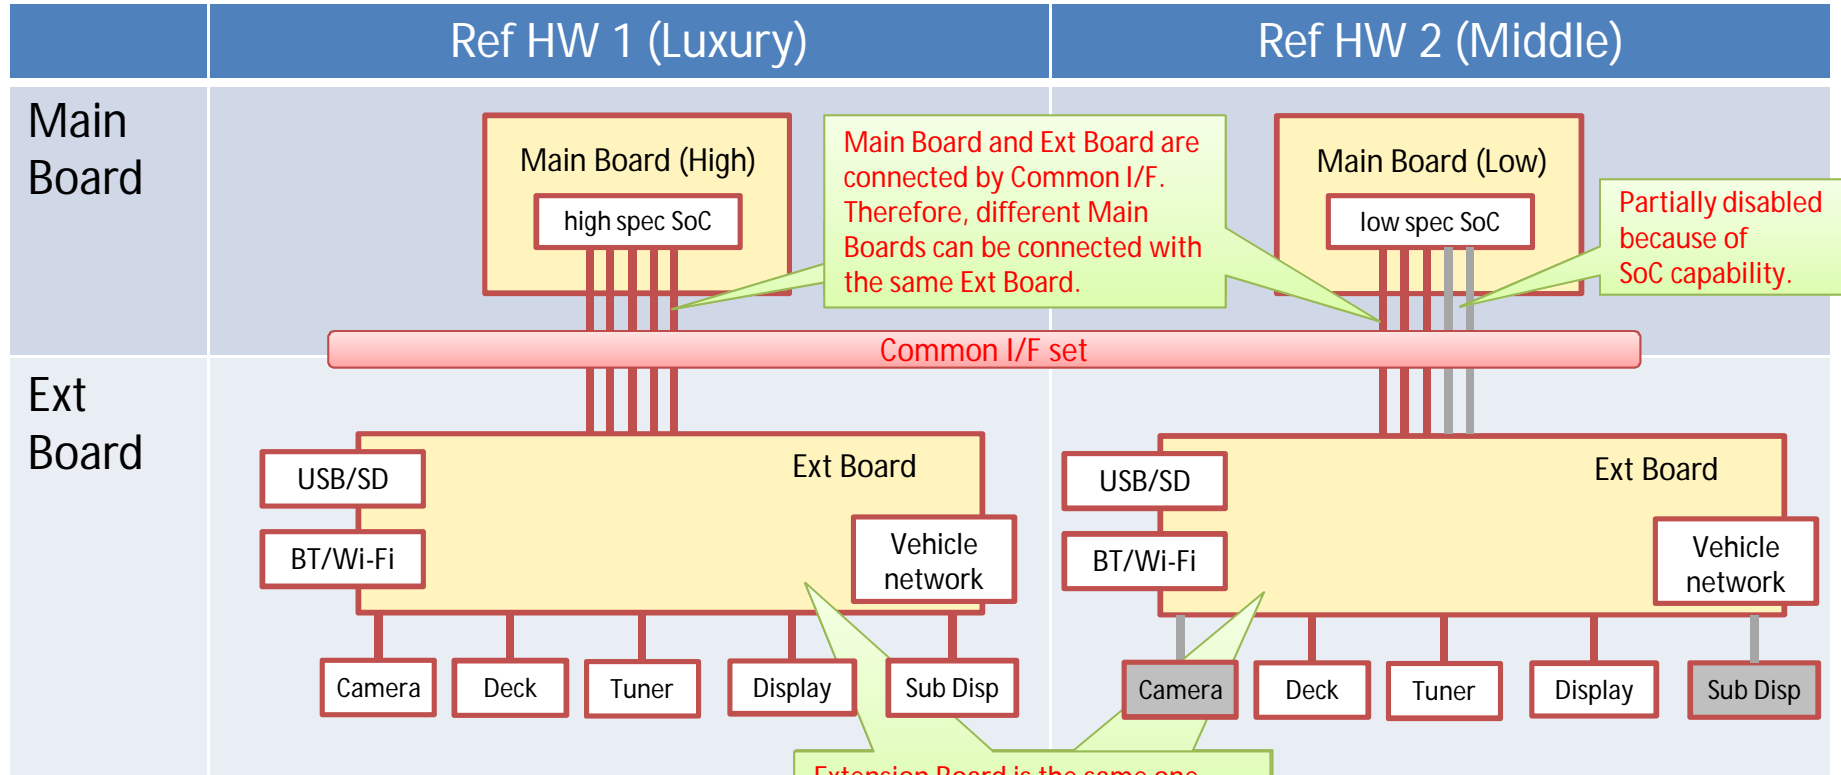

Major Policy of Reference Hardware

- (1) Two boards constitution : Main board + Extension board
Main Board (SoC Board) ... AGL common feature
Extension Board ... OEM specific feature
- (2) Interchangeable Main Boards
Covering various SoC grades / various SoC vendors
- (3) Interchangeable Extension Boards
Covering various types of Cars / various OEMs
(Replaceable with OEM specific boards)

Define Reference Hardware <Step1 >

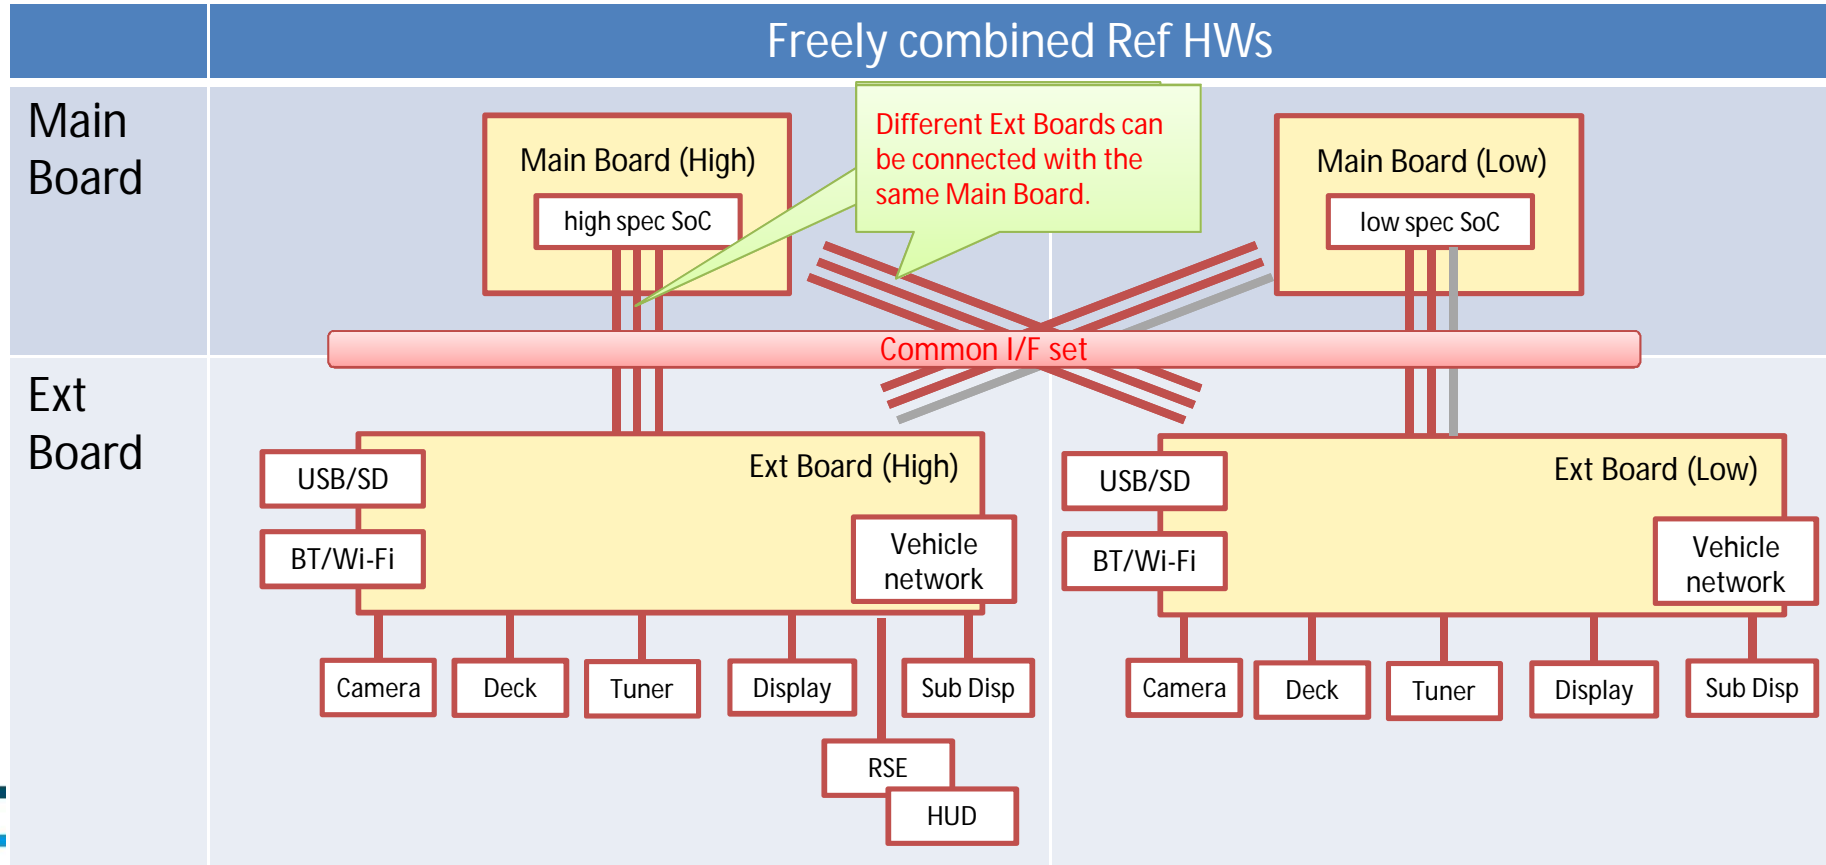

Realizing POLICY (1) and (2) as a first step.

Define Reference Hardware <Step2>

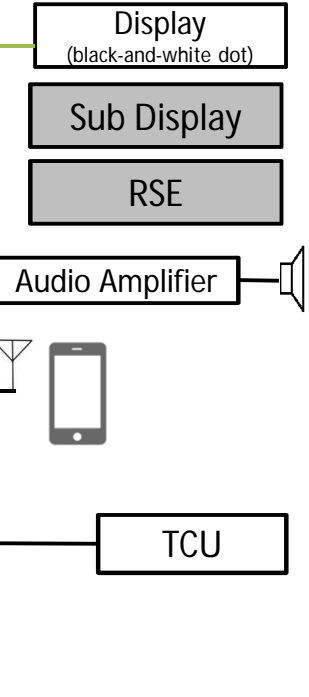

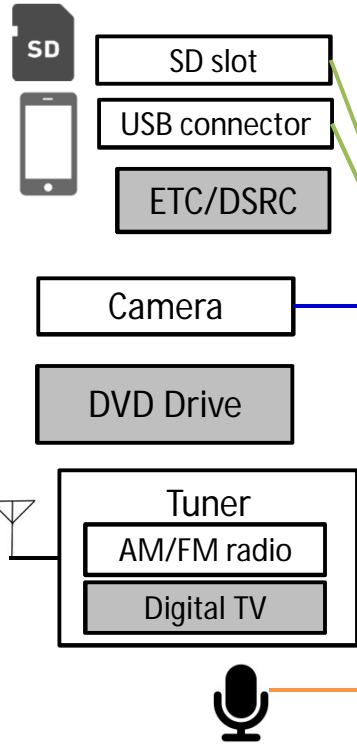

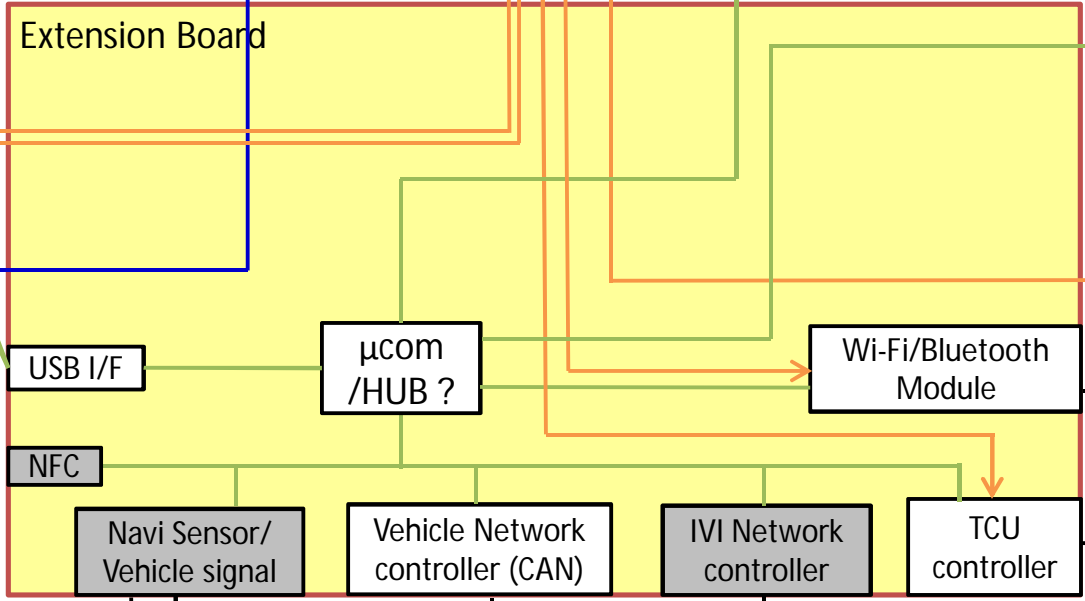

Realizing POLICY (3).

It can reduce the GAP between Ref HW and product HW.

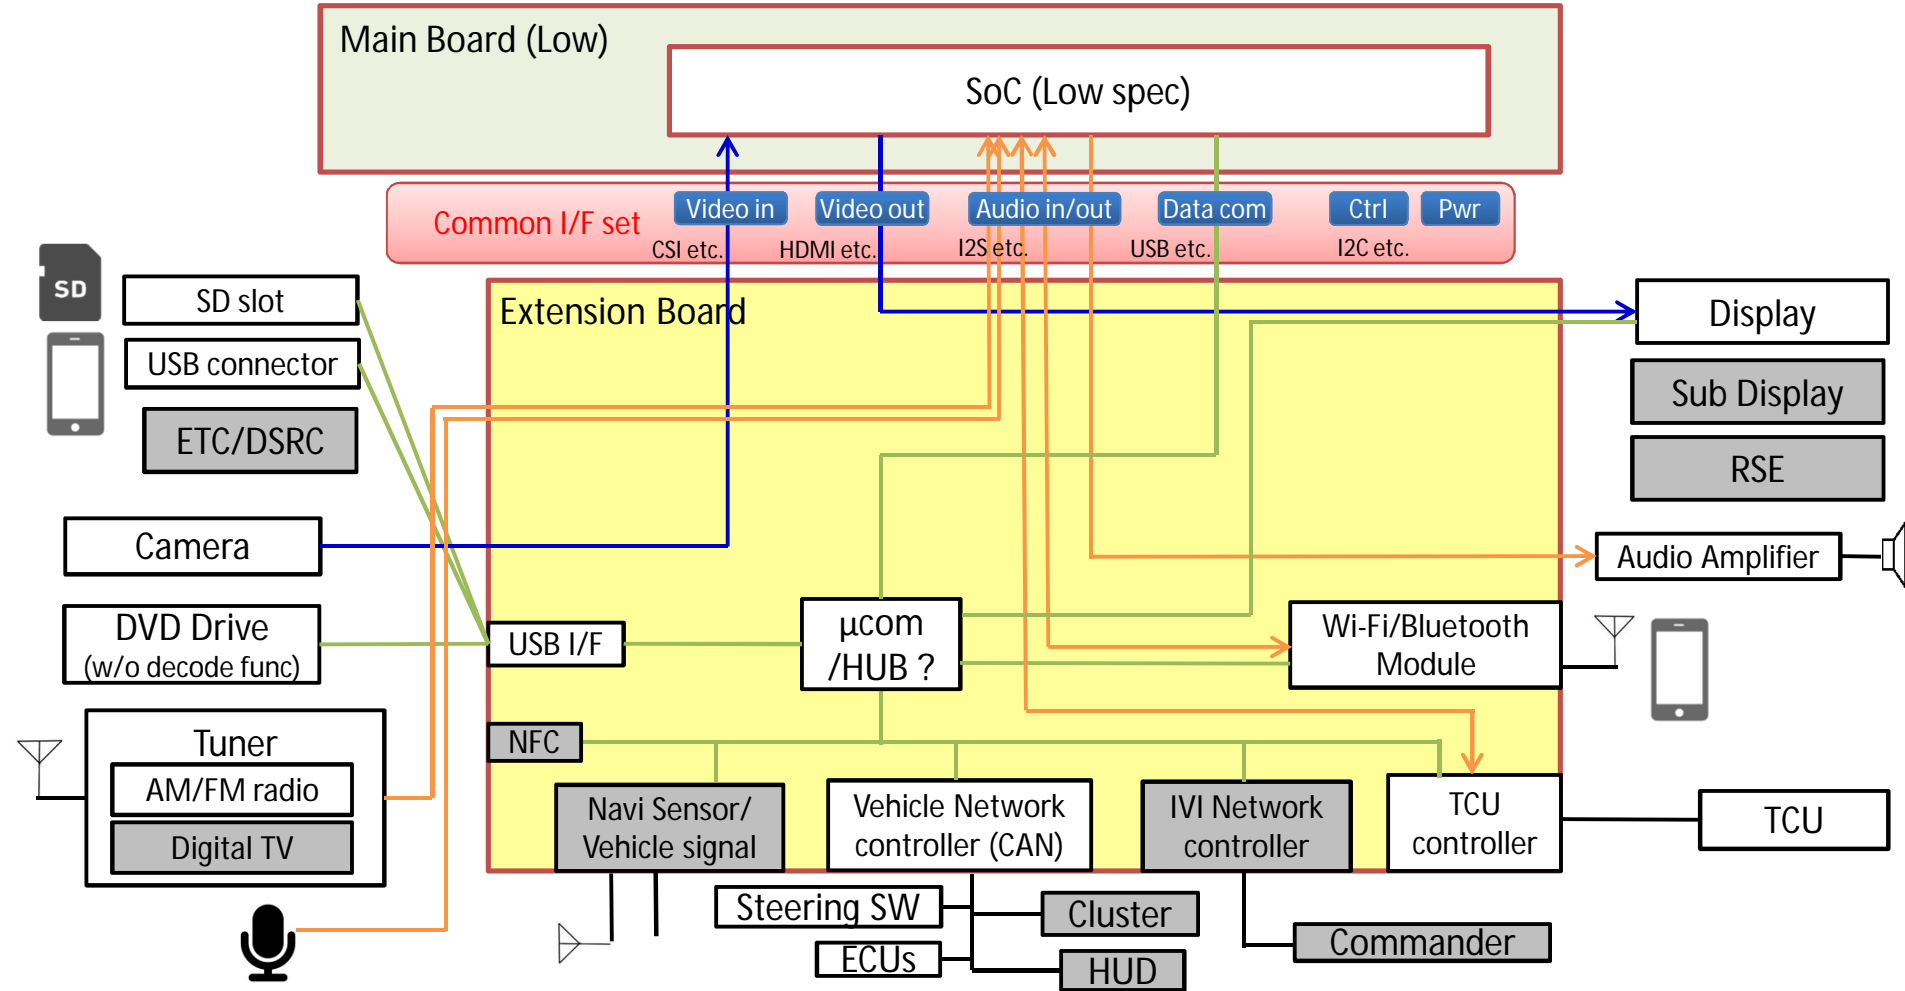

Example : Reference Hardware (Low)

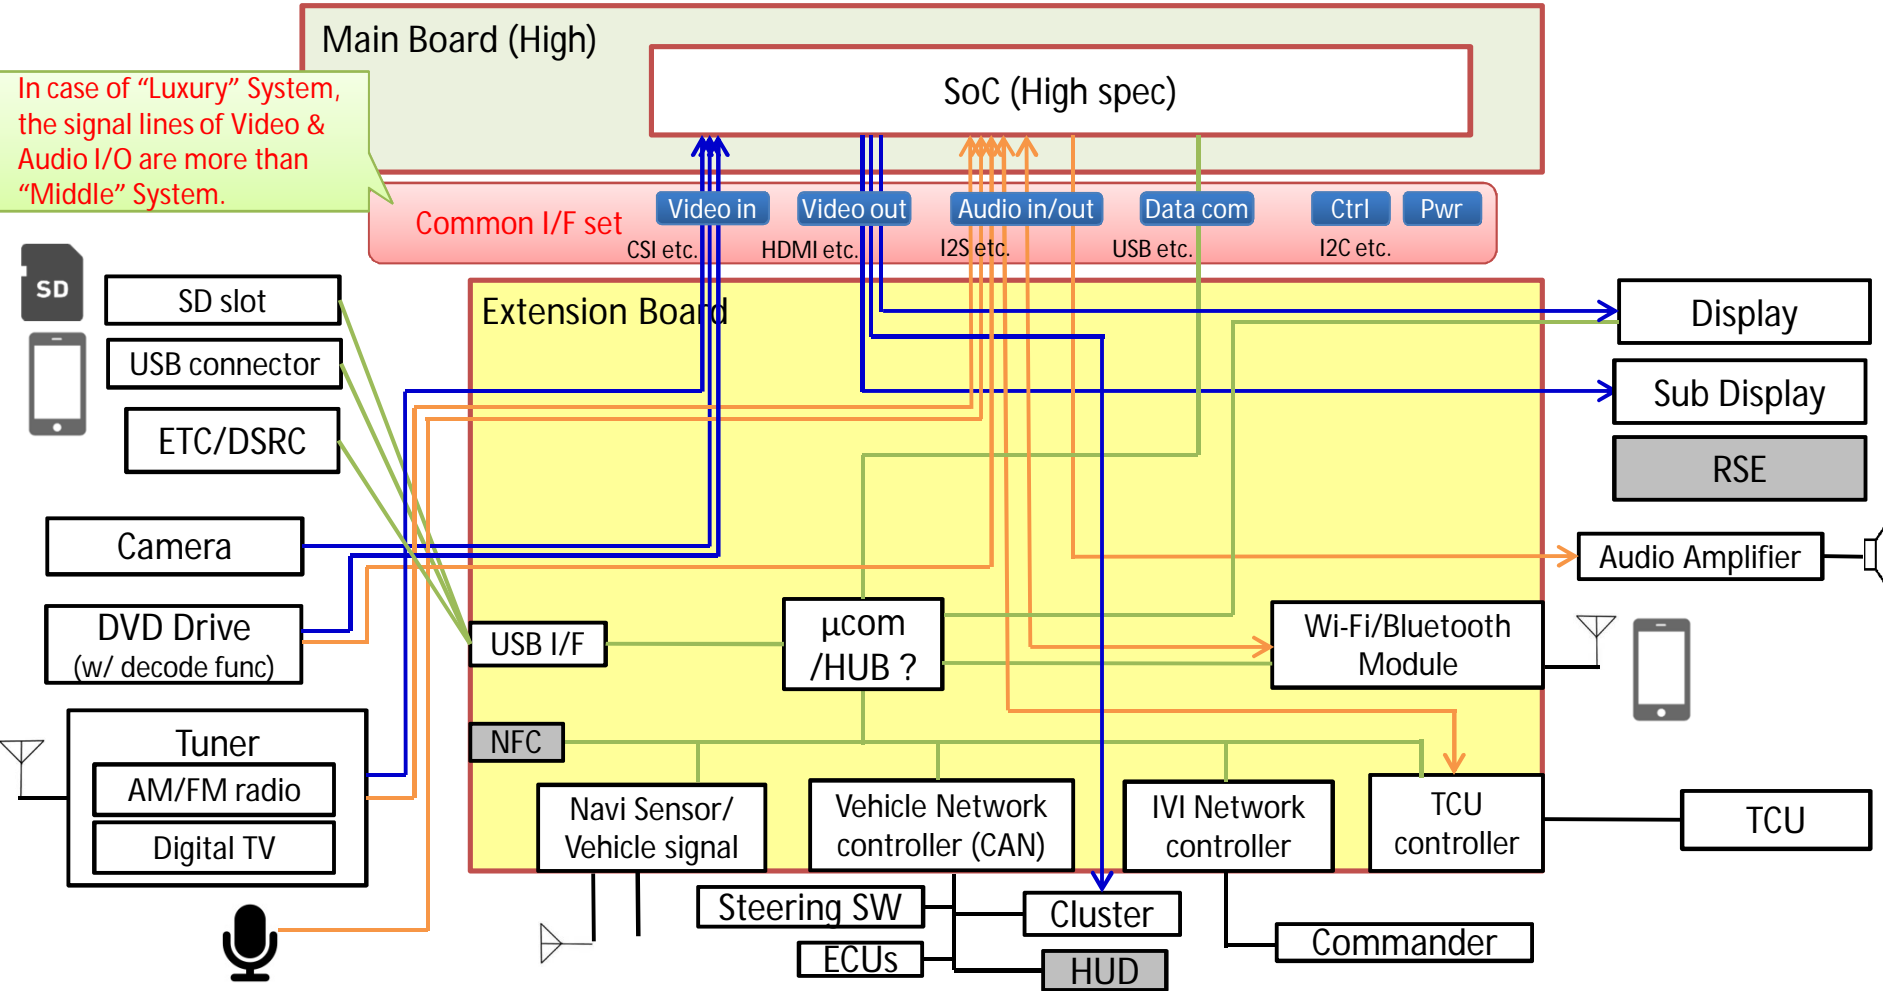

Almost same as "Middle" System?

Example : Reference Hardware (Middle)

Example : Reference Hardware (Luxury)

Example : Reference Hardware (Luxury+)

Tentative

Newly developed Ext Board which reduce the GAP between ref HW and product HW.
